ABSTRACTED-PUB-NO: JP 58027946A

BASIC-ABSTRACT:

Sintered alloy has a composition 20-27% Al, 1-10% Cr and balance Ni. It is

useful as a watch case, tie clip, sleeve link etc. The alloy has the structure

composed of a Ni(Cr)Al phase and a Ni(Cr)3Al phase. It has excellent hardness,

scratch-resistance and corrosion-resistance.

In the prepn., an alloy having desired composition is melted and pulverised

into a particle size of 10 microns or less. The obtd. powder is heat-treated at 800-1000 deg.C in a hydrogen gas or inert gas atmos. Powdery mixture Ni-Al alloy with Ni and Cr may be used, instead. The heat-treated powdery compsn. is compressed into desired body and sintered at 1300-1500 deg.C.
